**United Methodist
Church Book of
Discipline 2016** Oxford
University Press
Introduction to Business
covers the scope and
sequence of most
introductory business
courses. The book
provides detailed
explanations in the
context of core themes
such as customer
satisfaction, ethics,
entrepreneurship, global
business, and managing
change. Introduction to
Business includes
hundreds of current
business examples from a
range of industries and
geographic locations,
which feature a variety of
individuals. The outcome
is a balanced approach to
the theory and application
of business concepts, with
attention to the
knowledge and skills
necessary for student
success in this course and
beyond.
Introducing Quantum
Theory Pearson Education
India

Heat Transfer in
Aerospace Applications is
the first book to provide
an overall description of
various heat transfer
issues of relevance for
aerospace applications.
The book contains
chapters relating to
convection cooling, heat
pipes, ablation, heat
transfer at high velocity,
low pressure and
microgravity, aircraft heat
exchangers, fuel cells,
and cryogenic cooling
systems. Chapters
specific to low density
heat transfer (4) and
microgravity heat transfer
(9) are newer subjects
which have not been
previously covered. The
book takes a basic
engineering approach by
including correlations and
examples that an
engineer needs during the
initial phases of vehicle
design or to quickly
analyze and solve a
specific problem.
Designed for mechanical,
chemical, and aerospace
engineers in research
institutes, companies, and
consulting firms, this book
is an invaluable resource
for the latest on
aerospace heat transfer
engineering and research.
Provides an overall

description of heat
transfer issues of
relevance for aerospace
applications Discusses
why thermal problems
arise and introduces the
various heat transfer
modes Helps solve the
problem of selecting and
calculating the cooling
system, the heat
exchanger, and heat
protection Features a
collection of problems in
which the methods
presented in the book can
be used to solve these
problems
*Modern Engineering
Thermodynamics* CRC
Press
Health Informatics (HI)
focuses on the application
of Information Technology
(IT) to the field of
medicine to improve
individual and population
healthcare delivery,
education and research.
This extensively updated
fifth edition reflects the
current knowledge in
Health Informatics and
provides learning
objectives, key points,
case studies and
references.
Introduction to Business
InterVarsity Press
This groundbreaking
fashion branding and
management text brings

an analytical business dimension to the marketing and corporate techniques of the luxury fashion goods industry. It will make engaging reading for anyone who wishes to learn about the captivating business of turning functional products into objects of desire.

Untamed Billionaire, Undressed Virgin

Academic Press

For readers of *Democracy in Chains* and *Dark Money*, a revelatory investigation of the Religious Right's rise to political power. For too long the Religious Right has masqueraded as a social movement preoccupied with a number of cultural issues, such as abortion and same-sex marriage. In her deeply reported investigation, Katherine Stewart reveals a disturbing truth: this is a political movement that seeks to gain power and to impose its vision on all of society. America's religious nationalists aren't just fighting a culture war, they are waging a political war on the norms and institutions of American democracy. Stewart pulls back the curtain on the inner workings and leading personalities of a

movement that has turned religion into a tool for domination. She exposes a dense network of think tanks, advocacy groups, and pastoral organizations embedded in a rapidly expanding community of international alliances and united not by any central command but by a shared, anti-democratic vision and a common will to power. She follows the money that fuels this movement, tracing much of it to a cadre of super-wealthy, ultraconservative donors and family foundations. She shows that today's Christian nationalism is the fruit of a longstanding antidemocratic, reactionary strain of American thought that draws on some of the most troubling episodes in America's past. It forms a common cause with a globe-spanning movement that seeks to destroy liberal democracy and replace it with nationalist, theocratic and autocratic forms of government around the world. Religious nationalism is far more organized and better funded than most people realize. It seeks to control all aspects of government and society. Its successes have been stunning, and

its influence now extends to every aspect of American life, from the White House to state capitols, from our schools to our hospitals. *The Power Worshippers* is a brilliantly reported book of warning and a wake-up call. Stewart's probing examination demands that Christian nationalism be taken seriously as a significant threat to the American republic and our democratic freedoms.

Plates and Shells South-Western Pub

Quantum theory confronts us with bizarre paradoxes which contradict the logic of classical physics. At the subatomic level, one particle seems to know what the others are doing, and according to Heisenberg's "uncertainty principle", there is a limit on how accurately nature can be observed. And yet the theory is amazingly accurate and widely applied, explaining all of chemistry and most of physics. Introducing Quantum Theory takes us on a step-by-step tour with the key figures, including Planck, Einstein, Bohr, Heisenberg and Schrodinger. Each contributed at least one crucial concept to the theory. The puzzle of the wave-particle duality is here, along with

descriptions of the two questions raised against Bohr's "Copenhagen Interpretation" - the famous "dead and alive cat" and the EPR paradox. Both remain unresolved.

After Worlds Collide

Woodhead Publishing
Beginning a New Series by a New York Times Best-Selling Author. Will the People of Earth Bow Down to Alien Overlords^{3/4}or Will They Live Free or Die? First Contact Was Friendly When aliens trundled a gate to other worlds into the solar system, the world reacted with awe, hope and fear. But the first aliens to come through, the Glatun, were peaceful traders and the world breathed a sigh of relief. Who Controls the Orbitals, Controls the World When the Horvath came through, they announced their ownership by dropping rocks on three cities and gutting them. Since then, they've held Terra as their own personal fiefdom. With their control of the orbitals, there's no way to win and earth's governments have accepted the status quo. Live Free or Die. To free the world from the grip of the Horvath is going to take an unlikely hero. A hero unwilling to back

down to alien or human governments, unwilling to live in slavery and with enough hubris, if not stature, to think he can win. Fortunately, there's Tyler Vernon. And he has bigger plans than just getting rid of the Horvath. Troy Rising is a book in three parts^{3/4}Live Free or Die being the first part^{3/4}detailing the freeing of earth from alien conquerors, the first steps into space using off-world technologies and the creation of Troy, a thousand trillion ton battlestation designed to secure the solar system. At the publisher's request, this title is sold without DRM (Digital Rights Management).

Do you ever feel that you are leading in uncharted territory? Pastor and consultant Tod Bolsinger draws on decades of expertise guiding churches and organizations in this expanded practical leadership resource, offering illuminating insights and practical tools to help you reimagine what effective church leadership looks like in our rapidly changing world.

The Bitter Taste of Dying Lantern Books

Considered by many the greatest war novel of all time, All Quiet on the Western Front is Erich Maria Remarque's masterpiece of the German experience during World War I. I am young, I am twenty years old; yet I know nothing of life but despair, death, fear, and fatuous superficiality cast over an abyss of sorrow. . . . This is the testament of Paul Bäumer, who enlists with his classmates in the German army during World War I. They become soldiers with youthful enthusiasm. But the world of duty, culture, and progress they had been taught breaks in pieces under the first bombardment in the trenches. Through years of vivid horror, Paul holds fast to a single vow: to fight against the principle of hate that meaninglessly pits young men of the same generation but different uniforms against one another . . . if only he can come out of the war alive. "The world has a great writer in Erich Maria Remarque. He is a craftsman of unquestionably first rank, a man who can bend language to his will. Whether he writes of men or of inanimate nature, his

touch is sensitive, firm, and sure.”—The New York Times Book Review
Health Informatics: Practical Guide for Healthcare and Information Technology Professionals (Sixth Edition) Simon and Schuster

Noted for its practical, accessible approach to senior and graduate-level engineering mechanics, *Plates and Shells: Theory and Analysis* is a long-time bestselling text on the subjects of elasticity and stress analysis. Many new examples and applications are included to review and support key foundational concepts. Advanced methods are discussed and analyzed, accompanied by illustrations. Problems are carefully arranged from the basic to the more challenging level. Computer/numerical approaches (Finite Difference, Finite Element, MATLAB) are introduced, and MATLAB code for selected illustrative problems and a case study is included.

 For many parents of troubled teenagers, a therapeutic program that takes the child from the home for a period of time offers some respite from the daily tumult of acting

out, lies, and tension that has left the family under siege. However, just as the teenager is embarking on a journey of self-discovery, skill-development, and emotional maturation, so parents too need to use this time to recognize that their own patterns may have contributed to their family's downward spiral. This is *The Parallel Process*. Using case studies garnered from her many years as an adolescent and family therapist, Krissy Pozatek shows parents of pre-teens, adolescents, and young adults how they can help their children by attuning to emotions, setting limits, not rushing to their rescue, and allowing them to take responsibility for their actions, while recognizing their own patterns of emotional withdrawal, workaholism, and of surrendering their lives and personalities to parenting. *The Parallel Process* is an essential primer for all parents, whether of troubled teens or not, who are seeking to help the family stay and grow together as they negotiate the potentially difficult teenage years.
Live Free or Die Wipf and Stock Publishers
 Pearson introduces the

first edition of *Thermal Engineering* a complete offering for the undergraduate engineering students. With lucid exposition of the fundamental concepts along with numerous worked-out examples and well-labeled detailed illustrations, this book provides a holistic understanding of the subject. The content in the book encompasses applied thermodynamics, power plant engineering, energy conversion and management, internal combustion engines, turbomachinery, gas turbines and jet propulsion and refrigeration and air-conditioning taught at different levels of the curriculum.

Heat Transfer in Aerospace Applications
 Springer

The political philosopher Ryan T. Anderson, bestselling author of *When Harry Became Sally: Responding to the Transgender Moment*, teams up with the pro-life journalist Alexandra DeSanctis to expose the catastrophic failure—social, political, legal, and personal—of legalized abortion. *Hope in the Ruins of Roe* With the Supreme Court poised to return abortion law to

the democratic process, a powerful new book reframes the coming debate: Our fifty-year experiment with unlimited abortion has harmed everyone—even its most passionate proponents. Women, men, families, the law, politics, medicine, the media—and, of course, children (born and unborn)—have all been brutalized by the culture of death fostered by *Roe v. Wade*. Abortion hollows out marriage and the family. It undermines the rule of law and corrupts our political system. It turns healers into executioners and “women’s health” into a euphemism for extermination. Ryan T. Anderson, a compelling and reasoned voice in our most contentious cultural debates, and the pro-life journalist Alexandra DeSanctis expose the false promises of the abortion movement and explain why it has made everything worse. Five decades after *Roe*, everyone has an opinion about abortion. But after reading *Tearing Us Apart*, no one will think about it in the same way. *All Quiet on the Western Front* Pearson Education India
Connor O'Brien is

damaged, inside and out—proof of his dark and dangerous life. Sophy Woodruff has never known a man as devastatingly sexy as Connor. Intense, brooding and distant, he's everything she shouldn't desire.... Despite his vow of noncommitment, Connor can't resist bedding Sophy. But Sophy is a virgin, and once he's undressed her, this billionaire isn't sure he can walk away.... *Bad Faith* Oxford University Press
The MATSim (Multi-Agent Transport Simulation) software project was started around 2006 with the goal of generating traffic and congestion patterns by following individual synthetic travelers through their daily or weekly activity programme. It has since then evolved from a collection of stand-alone C++ programs to an integrated Java-based framework which is publicly hosted, open-source available, automatically regression tested. It is currently used by about 40 groups throughout the world. This book takes stock of the current status. The first part of the book gives an introduction to the most important concepts, with

the intention of enabling a potential user to set up and run basic simulations. The second part of the book describes how the basic functionality can be extended, for example by adding schedule-based public transit, electric or autonomous cars, paratransit, or within-day replanning. For each extension, the text provides pointers to the additional documentation and to the code base. It is also discussed how people with appropriate Java programming skills can write their own extensions, and plug them into the MATSim core. The project has started from the basic idea that traffic is a consequence of human behavior, and thus humans and their behavior should be the starting point of all modelling, and with the intuition that when simulations with 100 million particles are possible in computational physics, then behavior-oriented simulations with 10 million travelers should be possible in travel behavior research. The initial implementations thus combined concepts from computational physics and complex adaptive systems with concepts from travel behavior research. The

third part of the book looks at theoretical concepts that are able to describe important aspects of the simulation system; for example, under certain conditions the code becomes a Monte Carlo engine sampling from a discrete choice model. Another important aspect is the interpretation of the MATSim score as utility in the microeconomic sense, opening up a connection to benefit cost analysis. Finally, the book collects use cases as they have been undertaken with MATSim. All current users of MATSim were invited to submit their work, and many followed with sometimes crisp and short and sometimes longer contributions, always with pointers to additional references. We hope that the book will become an invitation to explore, to build and to extend agent-based modeling of travel behavior from the stable and well tested core of MATSim documented here.

Economics John Wiley & Sons

After earth was destroyed by a colliding planet the few survivors land on a new planet and have to learn how to survive the challenges presented to them.

Apostles of Reason

"O'Reilly Media, Inc."

President Donald Trump originated his political career by claiming that Barack Obama was not born in the USA. His "birtherism" theory was discredited, but there's another possibility about birth. Evangelicals have given birth to Donald Trump in the immaculate mistake. Evangelicals are not a collection of dumb and irrational people; they are the creators of the demolition presidency of Trump. He is their child—the result of almost one hundred years of evangelical angst, resentment, and hurt. This is the story of how Trump has become a secular evangelical preacher and his message of fear, hatred, division, and getting even has captured the hearts and minds of evangelicals. Rather than dismissing them, this work takes them seriously and literally and offers a frank and disturbing series of portraits of their determination to win at all costs.

Ever since the First Edition, *Economics: Principles and Policy* was

predicated on the view that practical issues and developments in the economy should influence the content of an introductory economics course. This book contains its share of theoretical material. But the theory is not merely an exercise in making students miserable; it is driven by issues that are real and current. And every discussion of theory is related to applications, so as to offer students a continuing sense of the relevance of the material to reality. - Publisher.

Canoeing the

Mountains Wipf and Stock Publishers

Brandon O'Brien and Randy Richards shed light on the ways that Western readers often misunderstand the cultural dynamics of the Bible. Identifying nine areas where commonplaces of modern Western thought diverge with the text, the authors ask us to reconsider long-held opinions about our most beloved book.

[The Didache](#) Advantage Media Group

The inside story of the epic turnaround of Ford Motor Company under the leadership of CEO Alan Mulally. At the end of 2008, Ford Motor Company was just months

away from running out of cash. With the auto industry careening toward ruin, Congress offered all three Detroit automakers a bailout. General Motors and Chrysler grabbed the taxpayer lifeline, but Ford decided to save itself. Under the leadership of charismatic CEO Alan Mulally, Ford had already put together a bold plan to unify its divided global operations, transform its lackluster product lineup, and overcome a dysfunctional culture of infighting, backstabbing, and excuses. It was an extraordinary risk, but it was the only way the Ford

family—America’s last great industrial dynasty—could hold on to their company. Mulally and his team pulled off one of the greatest comebacks in business history. As the rest of Detroit collapsed, Ford went from the brink of bankruptcy to being the most profitable automaker in the world. American Icon is the compelling, behind-the-scenes account of that epic turnaround. In one of the great management narratives of our time, Hoffman puts the reader inside the boardroom as

Mulally uses his celebrated Business Plan Review meetings to drive change and force Ford to deal with the painful realities of the American auto industry. Hoffman was granted unprecedented access to Ford’s top executives and top-secret company documents. He spent countless hours with Alan Mulally, Bill Ford, the Ford family, former executives, labor leaders, and company directors. In the bestselling tradition of *Too Big to Fail* and *The Big Short*, *American Icon* is narrative nonfiction at its vivid and colorful best.
