The evaluation of reproductive, maternal, newborn, and child health (RMNCH) by the Disease Control Priorities, Third Edition (DCP3) focuses on maternal conditions, childhood illness, and malnutrition. Specifically, the chapters address acute illness and undernutrition in children, principally under age 5. It also covers

maternal mortality, morbidity, stillbirth, and influences to pregnancy and pre-pregnancy. Volume 3 focuses on developments since the publication of DCP2 and will also include the transition to older childhood, in particular, the overlap and commonality with the child development volume. The DCP3 evaluation of these conditions produced three key findings: 1. There is significant difficulty in measuring the burden of key conditions such as unintended pregnancy, unsafe abortion, nonsexually transmitted infections, infertility, and violence against women. 2. Investments in the continuum of care can have significant returns for improved and equitable access, health, poverty, and health systems. 3. There is a large difference in how RMNCH conditions affect different income groups; investments in RMNCH can lessen the disparity in terms of both health and financial risk.

Thinking Critically case-based activities require students to apply the concepts found in the chapters to solve problems, make clinical judgement decisions concerning care management, and provide responses to patient questions and concerns. Reviewing Key Concepts questions in various formats give students ample opportunities to assess their knowledge and comprehension of information covered in the text. Matching, fill-in-the-blank, true/false, short-answer, and multiple-choice activities help students identify the core content of each chapter and test their understanding. Learning Key Terms matching and fill-in-the-blank questions let students test their ability to define all key terms highlighted in the corresponding textbook chapter. Perforated pages allow you to use activities for graded assignments. Answer key at the end of the book includes answers to all questions. *Contemporary Maternal-Newborn Nursing Care* World Health Organization

Birth Settings in America Elsevier Health Sciences

The main aim of this practical Handbook is to strengthen counselling and communication skills of skilled attendants (SAs) and other health providers, helping them to effectively discuss with women, families and communities the key issues surrounding pregnancy, childbirth, postpartum, postnatal and post-abortion care. Counselling for Maternal and Newborn Health Care is divided into three main sections. Part 1 is an introduction which describes the aims and objectives and the general layout of the Handbook. Part 2 describes the counselling process and outlines the six key steps to effective counselling. It explores the counselling context and factors that influence this context including the socio-economic, gender, and cultural environment. A series of guiding principles is introduced and specific counselling skills are outlined. Part 3 focuses on different maternal and newborn health topics, including general care in the home during pregnancy; birth and emergency planning; danger signs in pregnancy; post-abortion care; support during labor; postnatal care of the mother and newborn; family planning counselling; breastfeeding; women with HIV/AIDS; death and bereavement; women and violence; linking with the community. Each Session contains specific aims and objectives, clearly outlining the skills that will be developed and corresponding learning outcomes. Practical activities have been designed to encourage reflection, provoke discussions, build skills and ensure the local relevance of information. There is a review at the end of

each session to ensure the SAs have understood the key points before they progress to subsequent sessions.
