The 2018 Review of Program Design and Conditionality is the first comprehensive stocktaking of Fund lending operations since the global financial crisis. The review assesses program performance between September 2011 and end-2017. Programs during this period were defined by the protracted structural challenges faced by members and hampered by the persistently weak global environment.

Featuring a timely presentation of total survey error (TSE), this edited volume introduces valuable tools for understanding and improving survey data quality in the context of evolving large-scale data sets. This book provides an overview of the TSE framework and current TSE research as related to survey design, data collection, estimation, and analysis. It recognizes that survey data affects many public policy and business decisions and thus focuses on the framework for understanding and improving survey data quality. The book also addresses issues with data quality in official statistics and in social, opinion, and market research as these fields continue to evolve, leading to larger and messier data sets. This perspective challenges survey organizations to find ways to collect and process data more efficiently without sacrificing quality. The volume consists of

the most up-to-date research and reporting from over 70 contributors representing the best academics and researchers from a range of fields. The chapters are broken out into five main sections: The Concept of TSE and the TSE Paradigm, Implications for Survey Design, Data Collection and Data Processing Applications, Evaluation and Improvement, and Estimation and Analysis. Each chapter introduces and examines multiple error sources, such as sampling error, measurement error, and nonresponse error, which often offer the greatest risks to data quality, while also encouraging readers not to lose sight of the less commonly studied error sources, such as coverage error, processing error, and specification error. The book also notes the relationships between errors and the ways in which efforts to reduce one type can increase another, resulting in an estimate with larger total error. This book:

- Features various error sources, and the complex relationships between them, in 25 high-quality chapters on the most up-to-date research in the field of TSE
- Provides comprehensive reviews of the literature on error sources as well as data collection approaches and estimation methods to reduce their effects
- Presents examples of recent international events that demonstrate the effects of data error, the importance of survey data quality, and the real-world issues that arise from these errors
- Spans the four pillars of the total survey error paradigm (design, data collection, evaluation and analysis) to address key data quality issues in official statistics and survey research

Total Survey Error in Practice is a reference for survey researchers and data scientists in research areas that include social science, public opinion, public policy, and business. It can also be used as a textbook or supplementary material for a graduate-level course in survey research methods.

Integrating Spatial Information Technologies for Tomorrow Independently Published

Officially released on February 2, 2015. As one of the reference volumes of the FY2016 Budget request of the President, the popular Fiscal Year Budget Appendix volume presents detailed financial information on individual programs, Federal agencies and appropriation accounts that constitute the budget in tables and graphs. Includes for each Government department and agency the text of proposed appropriations language, budget schedules for each account, new legislative proposals, and explanations of the work to be performed and the funds needed, and proposed general provisions applicable to the appropriations of entire agencies or groups of agencies. Federal agency personnel, policy makers, think tank advocates, lawmakers, media organizations, and others interested in a "line item by line item" view of the President's proposed Fiscal year Budget will want this resource in their personal library collection. Public and academic libraries will want to make this annual reference product available for the general public in their Government collections. Students studying Public Finance, political scientists, and researchers will appreciate this detailed information with authoritative data legends presented in tables and graphs.

Health is one of the most crucial parts of our lives. To a great degree, factors such as living conditions, income, education, age, or even relations with our environment, health-related policies and access to health services might have a potential impact on health-related outcomes. Therefore, it is important to evaluate to what extent our health is affected by such factors using econometric and quantitative techniques. The application of such methods within the scope of

health-related problems provides a more robust approach to individuals along with policymakers and increases the efficiency of government policies. This book gathers selected studies addressing both quantitative economic and econometric applications within the scope of health with the intention of aiming at the graduate and post-graduate students, researchers and academics of econometrics, economics and related social sciences. The book consists of ten chapters. The last chapter is a special chapter allocated to "Young Researchers" in order to support and encourage their studies.

In the context of the (digital) transformation of economy and society, the technology acceptance of the population is increasingly influenced by a perceived loss of control through new technologies. Loss of control is defined in this volume as a multi-causal, multi-modal and cyclical process of transition of control and conceptually brought together in a multi-dimensional heuristic model. The results of a first quantitative-empirical analysis for Baden-Württemberg based on this model confirm that loss of control is a central factor influencing technology acceptance, but is perceived differently by different socio-demographic groups.

Evaluating Interreligious Peacebuilding and Dialogue John Wiley & Sons

In this landmark collection, the voices of pathmakers and innovators in peacebuilding evaluation are assembled to provide new direction for the field. Stock is taken of the development and challenges of engaging in the real-time learning that evaluation requires. Best practices for overcoming challenges are discussed and critiqued, as well as some of the basic assumptions guiding the field. New means of gathering information and understanding conflict processes are offered and examined. To continue to evolve and strengthen peacebuilding practices and professionalism, multiple calls are issued for collaborative learning and a field-wide effort at community inquiry.

Practical advice for redesigning "big, old" companies for digital success, with examples from Amazon, BNY Mellon, LEGO, Philips, USAA, and many other global organizations. Most established companies have deployed such digital technologies as the cloud, mobile apps, the internet of things, and artificial intelligence. But few established companies are designed for digital. This book offers an essential guide for retooling organizations for digital success. In the digital economy, rapid pace of change in technology capabilities and customer desires means that business strategy must be fluid. As a result, the authors explain, business design has become a critical management responsibility. Effective business design enables a company to quickly pivot in response to new competitive threats and opportunities. Most leaders today, however, rely on organizational structure to implement strategy, unaware that structure inhibits, rather than enables, agility. In companies that are designed for digital, people, processes, data, and technology are synchronized to identify and deliver innovative customer solutions—and redefine strategy. Digital design, not strategy, is what separates winners from losers in the digital economy. Designed for Digital offers practical advice on digital transformation, with examples that include Amazon, BNY Mellon, DBS Bank, LEGO, Philips, Schneider Electric, USAA, and many other global organizations. Drawing on five years of research and in-depth case studies, the book is an essential guide for companies that want to disrupt rather than be disrupted in the new digital landscape. B2B Executive Playbook Holistence Publications

The first book completely focused on successfully running B2B, which is very different from B2C. The fate of a B2B lies in the hands of a few individuals so what ultimately determines if a company thrives, or even survives, is how these key relationships are targeted, structured and managed. Over 30 percent of all B2B product development, marketing, and other discretionary dollars are wasted. When the realities of B2B marketplace are not integrated into a company's SOP, it is more likely that the company is wasting money as well as the employees' time and efforts. If the budget and plans aren't structured for B2B specifically, they won't move the meter. But there is good news -- there is a corresponding equal amount of potential revenue, growth and prosperity. The leading B2B companies dramatically build their top and bottom lines when leaders realize that success, undeniably and unquestionably, resides with how they engage with their customers and how that will drive their internal alignment and operations. What is it that they are doing differently than their competition and others in their industry that drive revenue growth, deliver predictable earnings, retain and grow customers and develop new offerings that customers will not only buy, but for which they will pay premiums.

U.S. Industrial Outlook Rowman & Littlefield Publishers

In the emerging fields of religious and interreligious peacebuilding, the question of monitoring and evaluation is a challenging, yet necessary process. The need to develop comprehensive yet fitting evaluation models for religious and interreligious peacebuilding is not only important for donor interests, but also critical as a means of documenting and learning for peacebuilders themselves. Theories and best practices in monitoring and evaluation have become prevalent in many fields, yet the amount of literature on evaluating intercultural and, especially, religious and interreligious projects remains scant in comparison. This volume offers a unique contribution that not only looks at several of the challenges and implications faced by religious and interreligious peacebuilders but also provides concrete examples of new models and tools for monitoring and evaluating religious and interreligious peacebuilding projects. In doing so, this volume serves as a tool and point of reference for individuals and organizations developing and implementing interreligious dialogue and peacebuilding projects.

Calls for independent research & reporting on the extent & nature of violence in CA prisons & the Youth Authority. The authorities have a duty to disclose, & the public has a right to know, whether we are seeing the rise of "violence as punishment." This report outlines a method for accomplishing three tasks: to assess the incidence & severity of violent injury & death within the CA correctional system; to design & implement a strategy for reducing the level of that violence to the lowest possible level; & to establish a means by which the results of the first two tasks can be communicated to the public & to government agencies.
