CHEP (Computing in High Energy Physics) is the largest international meeting of the communities of High Energy Physics, Computing Science and the Computing Industry. The sixth conference in this series was held in Rio de Janeiro, Brazil in September 1995. The focus of the conference was "Computing

for the next Millennium". High Energy Physics is at a point where major changes in the way data acquisition and computing problems are addressed will be called for in the high energy physics programs of the year 2000 and beyond. The conference covered a wide spectrum of topics including Data Access, Storage, and Analysis; Data Acquisition and Triggering; Worldwide Collaboration and Networking; Tools, Languages, and Software Development Environments; and special purpose processing systems. The papers presented both recent progress and radical approaches to computing problems as candidates for the basis of future computing in the field of high energy physics. Readership: Physicists and engineers. Keywords: Computing; High Energy; Data Access; Storage; Analysis

Safe, efficient, code-compliant electrical installations are made simple with the latest publication of this widely popular resource.

Like its highly successful previous editions, the National Electrical Code? 2011 LOOSE LEAF combines solid, thorough, research-based content with the tools you need to build an in-depth understanding of the most important topics. It provides the full text of the updated Code regulations alongside expert commentary from code specialists, offering code rationale, clarifications for new and updated rules, and practical, real-world advice on how to apply the code. And in a loose-leaf format, it's easy to customize your experience with the Code by adding job- and situation- specific materials. New to the 2011 edition are articles including first-time Article 399 on Overhead Conductors with over 600 volts, first-time Article 694 on Small Wind Electric Systems, first-time Article 840 on Premises Powered Broadband Communications Systems, and more. This winning combination has created a valuable reference for those in or entering careers in electrical design, installation, inspection, and safety.

Annals of the International Geophysical Year, Volume 26: IGY Calendar Record: Ozone Instruction Manual presents various indices and highlights of the solar, geophysical and associated events which took place during the IGY, a period of intensified observation of the earth and its environment. This book is organized into two main parts encompassing six chapters. The first part describes the features of the charts and tables in this Calendar Record of the IGY. The Supplementary Tables are additional indices of world-wide auroral observations which could not conveniently be adapted to the Calendar Record itself. They

also summarize for historical purposes the end product of the IGY World Days Program, namely the Calendar of Regular World Days and Intervals decided on before the IGY began and the declarations of Solar Alerts and Special World Intervals. The second part considers the determination of some constants used in the calculation of the amount of ozone from spectrophotometer measurements and an analysis of the accuracy of the results. This book is of value to geophysicists and researchers.
