Sagalassos 6 Since 1990, the ancient Greco-Roman city of Sagalassos in southwestern Turkey has been the focus of an interdisciplinary archaeological research project coordinated by the Katholieke Universiteit Leuven. Sagalassos, a popular cultural attraction for visitors to Turkey, is located between a dramatic mountain range and a lush agricultural plain. It was first settled around the fourteenth century B.C.E. and various kingdoms controlled the region in turn before it became a valuable hub of trade in the Roman Empire. Sagalassos was known especially for its olives and for its elegant red-slip tableware. The essays collected in this book reveal how the meticulous systematic and interdisciplinary reconstruction of the ecology and economy of the site and its territory has enhanced our understanding of the ancient settlement and its inhabitants beyond the traditional aspects of classical archaeology in Asia Minor. Highlighting geo-archaeological, archaeometrical, and bio-archaeological work performed during excavations and surveys between 1996 and 2006, this important book's insights greatly enhance the promotion of real interdisciplinarity in classical archaeology.

"Climate change. Water contamination. Air pollution. Food shortages. These and other global issues are regularly featured in the media. However, did you know that chemistry plays a crucial role in addressing these challenges? A knowledge of chemistry is also essential to improve the quality of our lives. For instance,

faster electronic devices, stronger plastics, and more effective medicines and vaccines all rely on the innovations of chemists throughout the world. With our world so dependent on chemistry, it is unfortunate that most chemistry textbooks do not provide significant details regarding real-world applications. Enter *Chemistry in Context* - "the book that broke the mold." Since its inception in 1993, *Chemistry in Context* has focused on the presentation of chemistry fundamentals within a contextual framework"--
