The Fantastic World of Bugs Simon and Schuster

This second edition of *Garden Insects of North America* solidifies its place as the most comprehensive guide to the common insects, mites, and other

"bugs" found in the backyards and gardens of the United States and Canada. Featuring 3,300 full-color photos and concise, detailed text, this fully revised book covers the hundreds of species of insects and mites associated with fruits and vegetables, shade trees and shrubs, flowers and ornamental plants, and turfgrass—from aphids and bumble bees to leafhoppers and mealybugs to woollybears and yellowjacket wasps—and much more. This new edition also provides a greatly expanded treatment of common pollinators and flower visitors, the natural enemies of garden pests, and the earthworms, insects, and other arthropods that help with decomposing plant matter in the garden. Designed to help you easily identify what you find in

the garden, the book is organized by where insects are most likely to be seen—on leaves, shoots, flowers, roots, or soil. Photos are included throughout the book, next to detailed descriptions of the insects and their associated plants. An indispensable guide to the natural microcosm in our backyards, *Garden Insects of North America* continues to be the definitive resource for amateur gardeners, insect lovers, and professional entomologists. Revised and expanded edition covers most of the insects, mites, and other “bugs” one may find in yards or gardens in the United States and Canada—all in one handy volume. Features more than 3,300 full-color photos, more than twice the illustrations of the first edition. Concise, informative text organized to help you

easily identify insects and the plant injuries that they may cause

A devastating examination of how collapsing insect populations worldwide threaten everything from wild birds to the food on our plate. From ants scurrying under leaf litter to bees able to fly higher than Mount Kilimanjaro, insects are everywhere. Three out of

every four of our planet's known animal species are insects. In *The Insect Crisis*, acclaimed journalist Oliver Milman dives into the torrent of recent evidence that suggests this kaleidoscopic group of creatures is suffering the greatest existential crisis in its remarkable 400-million-year history. What is causing the collapse of the insect world? Why does this alarming decline pose such a threat to us? And what can be done to stem the loss of the miniature empires that hold aloft life as we know it? With urgency and great clarity, Milman explores this hidden emergency, arguing that its consequences could even rival climate change. He joins the scientists tracking the decline of insect populations across the globe, including the soaring mountains of Mexico that host an epic,

yet dwindling, migration of monarch butterflies; the verdant countryside of England that has been emptied of insect life; the gargantuan fields of U.S. agriculture that have proved a killing ground for bees; and an offbeat experiment in Denmark that shows there aren't that many bugs splattering into your car windshield these days. These losses not only further tear at the tapestry of life on our degraded planet; they imperil everything we hold dear, from the food on our supermarket shelves to the medicines in our cabinets to the riot of nature that thrills and enlivens us. Even insects we may dread, including the hated cockroach, or the stinging wasp, play crucial ecological roles, and their decline would profoundly shape our own story. By connecting

butterfly and bee, moth and beetle from across the globe, the full scope of loss renders a portrait of a crisis that threatens to upend the workings of our collective history. Part warning, part celebration of the incredible variety of insects, *The Insect Crisis* is a wake-up call for us all.

For kids who love stickers and bugs, this is the ultimate sticker book. It's filled with creepy crawlies, fluttering butterflies, spindly spiders, and over 250 reusable stickers! Little entomologists will love learning all about their favorite insects and peeling the stickers from the back and sticking them all over the book. The stickers are easy to peel, perfect for little fingers! This colorful kids activity book keeps little ones engaged and learning about bugs as they play. Bright photos and stunning illustrations transport children into the world of insects. They're challenged to find the right stickers to go with each insect and complete the picture, such as matching wings to butterflies and planting the flowers in the garden. Kids can also get

creative and craft their own scenes out of different stickers, so there's no end to where their imagination can take them! Alongside the pictures are bite-sized descriptions and information that is easy to read and suitable for children 5 years and up. They will learn about the many types of insects, and what makes each of them unique. Discover how grasshoppers sing, why they have antennae, and how the giraffe beetle got its name. This sticker book inspires little ones to explore the outside world with activities such as follow the bee trail in the garden, and learn where bugs like to hide so they can look out for bugs in their own gardens. There's also a sticker quiz at the end, so you and your preschooler can read and engage together. Explore the Insect World

Real-life 7-year-old Sophia Spencer was bullied for loving bugs until hundreds of women scientists rallied around her. Now Sophie tells her inspiring story in this picture book that celebrates women in science, bugs of all kinds, and the importance of staying true to yourself. Makes a perfect gift for nature lovers on

Earth Day and every day! Sophia Spencer has loved bugs ever since a butterfly landed on her shoulder--and wouldn't leave!--at a butterfly conservancy when she was only two-and-a-half years old. In preschool and kindergarten, Sophia was thrilled to share what she knew about grasshoppers (her very favorite insects), as well as ants and fireflies... but by first grade, not everyone shared her enthusiasm. Some students bullied her, and Sophia stopped talking about bugs altogether. When Sophia's mother wrote to an entomological society looking for a bug scientist to be a pen pal for her

daughter, she and Sophie were overwhelmed by the enthusiastic response--letters, photos, and videos came flooding in. Using the hashtag BugsR4Girls, scientists tweeted hundreds of times to tell Sophia to keep up her interest in bugs--and it worked! Sophia has since appeared on Good Morning America, The Today Show, and NPR, and she continues to share her love of bugs with others.
