During the last four decades, a corpus-based approach to language teaching has become very significant. Direct use of corpora in language pedagogy is limited by certain factors: time, the lecturer's knowledge and skills needed to analyze the corpus, access to sources such as computers and appropriate computer tools, or a combination of these factors. The key to a successful corpus-based approach is in the appropriate level of the lecturer's guidance or pedagogical mediation, which depends on student age, experience, and prior knowledge. It is therefore very important that lecturers be equipped with the necessary knowledge and education for using and

analyzing corpora on a daily basis. *Computer Corpora and Open Source Software for Language Learning: Emerging Research and Opportunities* is a cutting-edge research publication that analyzes teacher experiences in implementing computer corpora into their language learning classrooms in order to formulate additional insights as to best strategies for integrating such tools that maximizes language learning efficiency in primary and secondary education. Highlighting topics such as ICT tools, language education, and linguistics, this book is ideal for academicians, educators, computer science teachers, IT professionals, researchers, and students.
