Matthew Cordell,

Explorers is a new picture

book about an

extraordinary trip to a

museum. When a family

goes to a local museum, a

boy notices a homeless

man sitting outside, making brightly colored origami birds. He convinces his dad to buy a bird the man makes just for him. Once inside the museum, his little sister takes the bird and launches it into the air. Is it lost? Soon another boy helps him look, and the paper bird brings two families—and two new friends—together. With

the style he used in *Wolf in the Snow*, Matthew Cordell shows how an ordinary family outing can be both extraordinary and magical.

This book is suitable for children age 4 and above.

“The Fox and the Stork” is a story about a stork that goes to a fox’s house for

dinner. The fox decides to make fun of a stork by treating it to a plate of soup. The stork is unable to drink the soup and leaves the fox's house hungry. The stork decides to teach the fox a lesson. The next day when the fox goes to the stork's house for dinner, the stork treats the fox to a tall jar of soup. The fox goes home hungry and realises its mistake.

"Fascinating...full of optimism...this quick, accessible read will

appeal to anyone with interest in how plants continue to surprise us."  
—Library Journal Do plants have intelligence? Do they have memory? Are they better problem solvers than people? The Revolutionary Genius of Plants—a fascinating, paradigm-shifting work that upends everything you thought you knew about plants—makes a compelling scientific case that these and other astonishing ideas are all true. Plants make up eighty percent of the weight of all living things

on earth, and yet it is easy to forget that these innocuous, beautiful organisms are responsible for not only the air that lets us survive, but for many of our modern comforts: our medicine, food supply, even our fossil fuels. On the forefront of uncovering the essential truths about plants, world-renowned scientist Stefano Mancuso reveals the surprisingly sophisticated ability of plants to innovate, to remember, and to learn, offering us creative solutions to the most

vexing technological and ecological problems that face us today. Despite not having brains or central nervous systems, plants perceive their surroundings with an even greater sensitivity than animals. They efficiently explore and react promptly to potentially damaging external events thanks to their cooperative, shared systems; without any central command centers, they are able to remember prior catastrophic events and to actively adapt to new

ones. Every page of *The Revolutionary Genius of Plants* bubbles over with Stefano Mancuso's infectious love for plants and for the eye-opening research that makes it more and more clear how remarkable our fellow inhabitants on this planet really are. In his hands, complicated science is wonderfully accessible, and he has loaded the book with gorgeous photographs that make for an unforgettable reading experience. *The Revolutionary Genius of Plants* opens the doors to

a new understanding of life on earth.

Che parole sussurrerebbero gli alberi, se fossimo ancora in grado di decifrare il loro linguaggio? Quale visione unisce l'aquila reale e l'abete bianco? Cosa ci insegnano le formiche o i licheni? Che cosa possiamo imparare dai microbi? Per rispondere a queste domande occorre un'immersione nei regni di natura, alla scoperta delle connessioni segrete che permettono al pianeta

di intonare il suo canto armonioso, a cui spesso l'essere umano è diventato sordo. Una visione profonda e alta del creato, che rivela le trame misteriose che compongono un'opera d'arte totale e continua, di cui l'essere umano è protagonista spesso inconsapevole. Un libro di poesia e di conoscenza, di bellezza e di denuncia, che ci apre gli occhi all'incanto e all'orrore. Quando l'uomo è inconsapevole può spingersi a compiere azioni brutali, fino a

sabotare quella stessa Madre che gli ha donato la vita. Un libro rivelatore, alla fine del quale il lettore avrà conquistato la chiarezza ineluttabile dell'importanza di agire concretamente nella quotidianità a protezione della natura. Un libro che restituisce al lettore il suo più alto valore: quello di uomo custode del creato. *L'Unico mondo possibile. dalla resilienza all'azione* Profile Books  
 "Exotic...erotic... Ocean Sea is highly romantic and breathtakingly lyrical."-- The New York Times Book

Review With Silk, his first novel to appear in English, Alessandro Baricco immediately proved himself to be a magical storyteller. With *Ocean Sea*, he has been acclaimed as the successor to Italo Calvino, and a major voice in modern literature. In *Ocean Sea*, Alessandro Baricco presents a hypnotizing postmodern fable of human malady--psychological, existential, erotic--and the sea as a means of deliverance. At the *Almayer Inn*, a remote shoreline hotel, an artist

dips his brush in a cup of ocean water to paint a portrait of the sea. A scientist pens love letters to a woman he has yet to meet. An adulteress searches for relief from her proclivity to fall in love. And a sixteen-year-old girl seeks a cure from a mysterious condition which science has failed to remedy. When these people meet, their fates begin to interact as if by design. Enter a mighty tempest and a ghostly mariner with a thirst for vengeance, and the Inn becomes a place where

destiny and desire battle for the upper hand. Playful, provocative, and ultimately profound, *Ocean Sea* is a novel of striking originality and wisdom.

*The Secret Ways of Perfume* Simon and Schuster

L'opera affronta la crisi ambientale collegandola indissolubilmente alla crisi sociale. Viene posta l'attenzione sull'urgenza di sviluppare un agire comune a livello di comunità locale per prepararsi a future situazioni emergenziali

che potrebbero mettere a repentaglio la sopravvivenza stessa della razza umana sul pianeta. Nel libro si pone l'accento sulla necessità che le comunità locali e gli individui sviluppino nuove forme di resilienza per far fronte alle criticità ambientali che si presenteranno nell'imminente futuro. Per contro non da soluzioni alla crisi in atto ma propone strade che, il singolo individuo e le comunità, dovrebbero percorrere per prepararsi a far fronte agli

sconvolgimenti che il clima ci porrà dinnanzi. Abbiamo un solo pianeta a disposizione ma questo non sembra chiaro alla maggior parte degli individui. Le evidenze sui cambiamenti climatici non sembrano affatto tali, a giudicare dai comportamenti abituali delle persone. La crisi dei valori si è fagocitata l'ambiente e cercare di salvarlo senza operare prima una riconversione radicale dei valori e delle coscienze, non sembra ormai possibile. Questa è la conclusione cui giunge

l'Autrice nel suo libro, sviluppando un ragionamento che collega strettamente la crisi sociale alla crisi ambientale. L'Uomo ha sacrificato il pianeta incatenandosi anima e corpo ad un idolo: il consumismo. Ci sono momenti come quello che vive ora l'umanità, in cui è necessario fermarsi e prendere una posizione precisa rispetto alle questioni e ai valori che regolano l'esistenza. La Terra è la casa di ciascun individuo, nessuno escluso. Per questo tutti

dovrebbero occuparsene, senza tregua e senza indugio dando il proprio personale contributo. Pronti a salvare insieme la nostra casa? Agiamo ora per costruire l'Unico Mondo Possibile, quello in cui ancora e per lungo tempo la Natura possa regnare sovrana e, in simbiosi con essa, l'Uomo. Vania Erby è nata a Cagliari nel 1972, laureata in Ingegneria si occupa di politiche ambientali da oltre un ventennio. Ideatrice del progetto "I bambini che piantano gli alberi". L'Unico mondo

SYNCHRONICITY - Flight 9941 Events on the edge of reality. Passengers disappear, one after the other Synchronicity, quantum physics and a thrilling plot: beyond the mirror exists the answer to our questions... For author Jane Milton Ke noys, the most important moment of her career has come: the Pulitzer Prize for fiction in New York. But the trip won't be exactly

what she thought. The passengers begin to disappear. Unusual circumstances slowly begin to manifest themselves, shattering the certainties of logic, events that sink their roots into a very particular conception of existence, discovered by the Swiss psychologist C. G. Jung and the father of Quantum Physics, Wolfgang Pauli. A great thriller based upon laws and scientific theories that open new extraordinary horizons to the human mind, offering

intriguing answers to the most disturbing questions. What is destiny? Do we really have freedom of choice? Is ours the only existing reality? Can we solve situations with no way out? A fascinating story, able to overturn normal points of view on what we are, and what we see. From Quantum Entanglement to our consciousness, from Synchronicity to the collective unconscious, Synchronicity is the threshold of direct connection between the

mind and the universe. Here the fascinating booktrailer: <https://www.pierluigitombetti.com/booktraile>

Set in the 1860s, The Leopard tells the spellbinding story of a decadent, dying Sicilian aristocracy threatened by the approaching forces of democracy and revolution. The dramatic sweep and richness of observation, the seamless intertwining of public and

private worlds, and the grasp of human frailty imbue The Leopard with its particular melancholy beauty and power, and place it among the greatest historical novels of our time. Although Giuseppe di Lampedusa had long had the book in mind, he began writing it only in his late fifties; he died at age sixty, soon after the manuscript was rejected as unpublishable. In his introduction, Gioacchino Lanza Tomasi, Lampedusa's nephew, gives us a detailed history of the initial publication

and the various editions that followed. And he includes passages Lampedusa wrote for the book that were omitted by the original Italian editors. Here, finally, is the definitive edition of this brilliant and timeless novel. (Translated from the Italian by Archibald Colquhoun.)

 "Highly

entertaining...Mabey gets us to look at life from the plants' point of view."  
 —Constance Casey, *New York Times* The Cabaret of Plants is a masterful, globe-trotting exploration of the relationship between humans and the kingdom of plants by the renowned naturalist Richard Mabey. A rich, sweeping, and wonderfully readable work of botanical history, The Cabaret of Plants explores dozens of plant species that for millennia have challenged our imaginations, awoken our

wonder, and upturned our ideas about history, science, beauty, and belief. Going back to the beginnings of human history, Mabey shows how flowers, trees, and plants have been central to human experience not just as sources of food and medicine but as objects of worship, actors in creation myths, and symbols of war and peace, life and death. Writing in a celebrated style that the Economist calls "delightful and casually learned," Mabey takes readers from the

Himalayas to Madagascar to the Amazon to our own backyards. He ranges through the work of writers, artists, and scientists such as da Vinci, Keats, Darwin, and van Gogh and across nearly 40,000 years of human history: Ice Age images of plant life in ancient cave art and the earliest representations of the Garden of Eden; Newton's apple and gravity, Priestley's sprig of mint and photosynthesis, and Wordsworth's daffodils; the history of cultivated

plants such as maize, ginseng, and cotton; and the ways the sturdy oak became the symbol of British nationhood and the giant sequoia came to epitomize the spirit of America. Complemented by dozens of full-color illustrations, *The Cabaret of Plants* is the magnum opus of a great naturalist and an extraordinary exploration of the deeply intertwined history of humans and the natural world.

In this playful yet informative manifesto, a leading plant neurobiologist presents the eight fundamental pillars on which the life of plants—and by extension, humans—rests. Even if they behave as though they were, humans are not the masters of the Earth, but only one of its most irksome residents. From the moment of their

arrival, about three hundred thousand years ago—nothing when compared to the history of life on our planet—humans have succeeded in changing the conditions of the planet so drastically as to make it a dangerous place for their own survival. The causes of this reckless behavior are in part inherent in their predatory nature, but they also depend on our total incomprehension of the rules that govern a community of living beings. We behave like

children who wreak havoc, unaware of the significance of the things they are playing with. In *The Nation of Plants*, the most important, widespread, and powerful nation on Earth finally gets to speak. Like attentive parents, plants, after making it possible for us to live, have come to our aid once again, giving us their rules: the first Universal Declaration of Rights of Living Beings written by the plants. A short charter based on the general principles that regulate the common life

of plants, it establishes norms applicable to all living beings. Compared to our constitutions, which place humans at the center of the entire juridical reality, in conformity with an anthropocentrism that reduces to things all that is not human, plants offer us a revolution.

Sitting at his desk, Bernardo Soares imagined himself free forever of Rua dos Douradores, of his boss Vasques, of Moreira the book-keeper,

of all the other employees, the errand boy, the post boy, even the cat. But if he left them all tomorrow and discarded the suit of clothes he wears, what else would he do? Because he would have to do something. And what suit would he wear? Because he would have to wear another suit. A self-deprecating reflection on the sheer distance between the loftiness of his feelings and the humdrum reality of his life, *The Book of Disquiet* is a classic of existentialist

literature.

*Libertà e lavoro* Other Press, LLC

In this richly illustrated volume, a leading neurobiologist presents fascinating stories of plant migration that reveal unexpected connections between nature and culture. When we talk about migrations, we should study plants to understand that these phenomena are unstoppable. In the many different ways plants move, we can see the incessant action and drive to spread life that has led

plants to colonize every possible environment on earth. The history of this relentless expansion is unknown to most people, but we can begin our exploration with these surprising tales, engagingly told by Stefano Mancuso. Generation after generation, using spores, seeds, or any other means available, plants move in the world to conquer new spaces. They release huge quantities of spores that can be transported thousands of miles. The number and

variety of tools through which seeds spread is astonishing: we have seeds dispersed by wind, by rolling on the ground, by animals, by water, or by a simple fall from the plant, which can happen thanks to propulsive mechanisms, the swaying of the mother plant, the drying of the fruit, and much more. In this accessible, absorbing overview, Mancuso considers how plants convince animals to transport them around the world, and how some plants need particular

animals to spread; how they have been able to grow in places so inaccessible and inhospitable as to remain isolated; how they resisted the atomic bomb and the Chernobyl disaster; how they are able to bring life to sterile islands; how they can travel through the ages, as they sail around the world.

Per quanto incredibile ci possa sembrare, le piante sono in grado di provare

un'ampia gamma di emozioni. E come è stato recentemente dimostrato sperimentalmente, sanno anche, con mezzi dai più straordinari ai più semplici, trasmettere quello che provano. Si difendono, attaccano, stringono alleanze, cacciano, costruiscono, trascinano, comunicano a distanza le loro paure, le loro sofferenze e le loro gioie. È anche possibile che ci inviino informazioni terapeutiche, messaggi di gratitudine, richieste di aiuto? Sì, le piante sono dotate di intelligenza, di

sensibilità e perfino di una forma di "telepatia", rilevata anche dagli strumenti di misurazione. Sebbene sorprendente, ciò che viene raccontato in questo libro è il risultato di osservazioni ed esperimenti scientifici. Tra saggio e narrazione, la vita emotiva e relazionale del regno vegetale raccontata dalla penna evocativa di un affermato romanziere, appassionato botanico, che ci porterà a riscoprire l'"Homo ecologicus" dentro di noi. *The Nation of Plants*
