Academic professionals are expected to restrain self-interest, promote the ideals of public service, and maintain high standards of performance, while society grants the profession autonomy to regulate itself through peer review. Hamilton conveys the need for ethical leadership from within the peer collegium--a leadership that will foster a culture of high aspiration and peer review. This book suggests that the umbrella academic organizations step forward and draft a model code of ethics for the profession of higher education. Further discussion reveals how such attempts become difficult in face of the market's relentless pressure to frame the institution-student relationship in the economic terms of provider and customer. The book also offers an

analysis of academic tradition, academic freedom, and the principles of professional conduct and shared governance. Typical problems in academic life are presented, each followed by questions designed to stimulate seminar-type discussion. Appendices contain a proposed code of ethics as well as AAUP statements on the subject.

Mentoring has always been an important factor in life and particularly in academia. In fact, making choices about educational pursuits and subsequent careers without input from mentors can prove disastrous. Fortunately, many individuals have “natural” mentors and for them these choices are greatly facilitated. Others are not privileged with natural mentors and as such often struggle with making these tough choices. Many times these individuals are from underserved and disadvantaged backgrounds, where mentors are too few and far between. For them, deciding on which career path to take can be based not only on insufficient information but oft times on

inaccurate information. Although the tips in this monograph are designed for helping all individuals who are interested in pursuing the study of science and science careers, a special mentoring focus is on those students who have not experienced the advantages of the privileged class. Additionally, tips are included for those who are interested in effectively mentoring these individuals. How and why a person gets to that point of wanting to mentor is not as important as the fact that they have made that commitment and this monograph will help them do exactly that. When I received my PhD in Reproductive Endocrinology from the University of Wisconsin, I was ready and anxious to discover all kinds of new and exciting aspects about this field of science.

This work is an examination of all aspects of the science in developing effective dosage form for drug delivery. Pharmaceutics refers to the subfield of pharmaceutical sciences that develops drug delivery products or devices to optimize the drug's performance once administered. This multidisciplinary field draws on physical chemistry, organic chemistry, and biophysics to generate and refine these crucial elements of medical care. Moreover, incorporating such disparate dimensions of drug product design as material properties and legal regulation bridges the gap between effective chemicals and viable medical treatments. Integrated Pharmaceutics provides a

comprehensive introduction to the creation and manufacture of effective dosage forms for drug delivery. It presents its subject following the principles of physical pharmacy, product design, and drug regulations. This tripartite structure allows readers to move from theory to practice, beginning from a firm foundation of physical pharmacy principles, including drug solubility and stability estimation, rheology, and interfacial properties. From there, it proceeds to discussions of drug product design and of harmonizing pharmaceutical design with the regulatory regimens and technological standards of the United States, European Union, and Japan. Readers of the second edition of Integrated Pharmaceutics will also find: A glossary defining key terms,

extensive informative appendices, and a list of references leading to the primary literature in the field for each chapter. Earlier chapters are expanded, with additional new chapters including one entitled "Biotechnology Products." Supplementary instructor guide with questions and solutions available online for registered professors. Updated regulatory guidelines including quality by design, design space analysis, process analytical technology, polymorphism characterization, blend sample uniformity, and stability protocols. Integrated Pharmaceuticals is a useful textbook for graduate students in pharmaceutical sciences, drug formulation and design, and biomedical engineering. In addition, professionals in the pharmaceutical industry, including

regulatory bodies, will find it a helpful reference guide.

How colleges and universities can live up to their ideals of diversity, and why inclusivity and excellence go hand in hand. Most colleges and universities embrace the ideals of diversity and inclusion, but many fall short, especially in the hiring, retention, and advancement of faculty who would more fully represent our diverse world—in particular women and people of color. In this book, Abigail Stewart and Virginia

Valian argue that diversity and excellence go hand in hand and provide guidance for achieving both. Stewart and Valian, themselves senior academics, support their argument with comprehensive data from a range of disciplines. They show why merit is often overlooked; they offer statistics and examples of individual experiences of exclusion, such as being left out of crucial meetings; and they outline institutional practices that keep exclusion invisible, including reliance on proxies for excellence, such as prestige, that disadvantage outstanding candidates who are not members of the white male majority. Perhaps most important, Stewart and Valian provide practical advice for overcoming obstacles to inclusion. This advice is

based on their experiences at their own universities, their consultations with faculty and administrators at many other institutions, and data on institutional change. Stewart and Valian offer recommendations for changing structures and practices so that people become successful in ways that benefit everyone. They describe better ways of searching for job candidates; evaluating candidates for hiring, tenure, and promotion; helping faculty succeed; and broadening rewards and recognition. *The MBA Field Guide: How to Get In & What to Expect at the World's Renowned Programs* SAGE
