Register and Defense Times IMO Publishing Publishes in-depth articles on labor subjects, current labor statistics, information about current labor contracts, and book reviews.

Shipbuilding & Shipping Record Bloomsbury Publishing

The Book has been thoroughly revised, keeping in mind the rapid technological advances in this mammoth industry and also the feedback received from various quarters. Relevant extracts from current

SOLAS, IACS, Lloyd's Register, DNV and ABS Rules, have been included with permission. However, these must be used only for academic purposes.

Relevant current documents onboard ships must be referred to, for the purpose of complying with Classification Societies' and other Statutory Requirements.

""An up-to-date, comprehensive guide to professional and academic qualifications in Britain - the Bible in fact!"" -- Education & Training ""The single best one-volume reference on British Educational awards in print."" -- World Education News and Reviews * Reflects the many developments which have occurred within the changing field of educational, professional, academic, technical and vocational qualifications in Britain. * Takes account of the

latest changes in university status, listing degree-awarding colleges of further and higher education in addition to the universities themselves Gives up-to-date information on vocational qualifications including NVQs, GNVQs and SNVQs * Covers national secondary school examinations and more than 200 career fields, detailing their professional and accrediting bodies, levels of membership and qualifications. * Fully indexed, with a further

index of designatory letters and abbreviations that, in today's world of the acronym, will prove invaluable
Chief Engineer Officer and Second Engineer Officer The History Press
 This model course aims to meet the mandatory minimum requirements for knowledge, understanding and proficiency in Table A-III/2 of STCW Code for the function Marine Engineering at the Management Level, for the function Electrical, Electronic and Control

Engineering at the Management Level, for the function Maintenance and Repair at the Management Level and the background knowledge to support Controlling the Operation of the Ship and Care for Persons on Board at the Management Level.
The Log CRC Press
 Arrested Development takes a hard look at the state of Nigeria's shipping sector and concludes that the sector has failed to live up to expectation. Inconsistent government policies, mediocrity, poor

planning, and a general lack of understanding of the role of shipping in national development have all contributed to the sorry state of the shipping sector. The author traced the history of Nigeria's shipping sector from the precolonial era to the present time and concludes that a lot more needs to be done if meaningful development of the sector is to be attained.

Marine Auxiliary Machinery, Seventh Edition is a 16-chapter text that covers the significant advances in marine auxiliary machinery relevant to the certification of competency examinations. The introductory chapters deal with the basic components of marine machineries, such as propulsion system, heat exchanger, valves, and pipelines. The succeeding chapters describe the pumps and pumping system, specifically the

tanker and gas carrier cargo pumps. Considerable chapters are devoted to the operation of machinery's major components, including the propeller shaft, steering gear, auxiliary power, bow thrusters, and stabilizers. Other chapters consider the refrigeration, heating, ventilation, and air conditioning systems. The final chapters tackle the safety system of marine auxiliary machinery, particularly the fire protection, safety, instrumentation, and control systems. This

book will prove useful to marine and mechanical engineers.

Author: House

In the Royal Navy vernacular, the term 'greenie' describes the officers and ratings responsible for the electrical engineering functions of the fleet. Electrical engineering has 'driven' the Royal Navy for far longer than one might imagine, from solving the problem of magnetic

interference with the compass by the ironclad early in the 20th century onward. Author Commander Moore traces the development of technology from 1850 to today's integrated micro computers that control almost every aspect of navigation, intel, and strike capacity. At the same time, he describes how the Navy's structure and manpower changed to accommodate the new technologies, changes often accelerated in wartime, particularly in World War II. Without the

full cooperation of naval establishments and organisations and various public and private museums and manufacturers, this work would have been impossible to produce. Written in an anecdotal, narrative style but with a complete mastery of the science itself, it will appeal not only to those interested in the history of the Royal Navy but also those many thousands, past and present, who can claim the honour of calling themselves one of the Greenies.

Proceedings of the Marine Safety Council Elsevier

Within the marine and offshore industry, there is a clear and growing need for increased training and education on the use of electrical power systems. The number of electrical plant and appliances now in service has grown at an alarming rate in recent years, as has the amount of electrical power generated and utilised on board. Large passenger ships now carry as many electrical officers as marine engineers, and electrical propulsion is

now in common use by LNG carriers, small parcel tankers, oil tankers, ferries, offshore support, the navy, fleet auxiliary, cable layers and cruise ships. A number of shipping companies now award the Chief Electro Technical Officer the equivalent rank to the ship's master and Chief Engineer. These developments have resulted in the establishment of a Foundation Degree programme for Electro Technical Officers and the current development of

full degree programmes. As such, a targeted textbook for students on the subject is required. As with all titles in the Reeds Marine Engineering Series, this book will be written in clear, accessible language, so as to be of use to all students and particularly those for whom English isn't their first language. Technical drawings and diagrams will be used throughout and each chapter will be accompanied by example examination questions.

The Dominions Office and

Colonial Office List for Food & Agriculture Org. Presents professional information designed to keep Army engineers informed of current and emerging developments within their areas of expertise for the purpose of enhancing their professional development. Articles cover engineer training, doctrine, operations, strategy, equipment, history, and other areas of interest to the engineering community.

Report of the Commissioner of Education Made to the Secretary of the Interior for the Year ... with Accompanying Papers
The TransNav 2013 Symposium held at the Gdynia Maritime University, Poland in June 2013 has brought together a wide range of participants from all over the world. The program has offered a variety of contributions, allowing to look at many aspects of the navigational safety from various different points of view. Topics

presented and discussed at the Symposium were: navigation, safety at sea, sea transportation, education of navigators and simulator-based training, sea traffic engineering, ship's manoeuvrability, integrated systems, electronic charts systems, satellite, radio-navigation and anti-collision systems and many others. This book is part of a series of four volumes and provides

an overview of Education and Training, Human Resources and Crew Resource Management, Policy and Economics and is addressed to scientists and professionals involved in research and development of navigation, safety of navigation and sea transportation.
